

MELANOFREE DEPIGMENTATION MAINTENANCE CREAM

Maintenance cream is formulated to maintain the efficacy of the MelanoFree whitening mask. It has to be used after 3 days from the first MelanoFree whitening treatment.

What is depigmenting cream?

Depigmenting creams are used to treat areas of skin that are hyperpigmented (darkly coloured). They may contain a combination of different medicines including:

- Hydroquinone or mono benzyl ether of hydroquinone – these stop melanocytes (pigmenting cells) in your skin from making melanin. Melanin is the substance that causes pigmentation (natural coloring) of your skin.
- Retinoids (including tretinoin and retinoic acid) – increase the turnover of new skin cells and help the hydroquinone to penetrate the skin.
- Corticosteroids (such as hydrocortisone) – prevent and reduce inflammation of the skin.

What should be the time gap between the two applications of depigmenting cream?

You should not apply other treatments to your skin at the same time as the depigmenting cream. The time gap between the two applications of depigmenting cream should be 8 hours. If you need to use other products on the skin, please wait at least one hour after you have applied the depigmenting cream.

melanofree depigmentation maintenance cream

30 g. 1.06 Fl. Oz.

Phototypes I-VI

What is the application method?

An effective lightening cream must go hand in hand with the application of a sun protection factor minimum SPF 15. While the depigmenting cream is applied in the evening and works during the night, a sun protection factor must imperatively be used during the day, to protect and prevent over-stimulation of the melanocytes from UV radiation.

How long does it take for depigmentation to go away?

It can take 24 months for pH to fully fade, although in some cases it may take longer. The length of time it takes for pH to fade depends on how dark the spot is compared to the surrounding skin. The bigger the contrast between the muscles and your natural skin tone, the longer it will take to fade.

Indication

Maintenance cream for whitening treatment

Ingredients

Aqua / Water, Butyl Methoxydibenzoylmethane, Ethylhexyl Methoxycinnamate, Olive Glycerides, Cetyl Alcohol, Apricot Kernel Oil PEG-6 Esters, C13-15 Alkane, Glyceryl Stearate, Titanium Dioxide, Azelaic Acid, Triethanolamine, Lactic Acid, Alpha-Arbutin, Propylene Glycol, PEG-75 Stearate, Caramel, Ceramide 3, Phytic Acid, Phenoxyethanol, Glycyrrhiza Glabra Root Extract, Ceteth-20, Steareth-20, Ethyl Ascorbic Acid, Hexylresorcinol, Kojic Dipalmitate, Tocopheryl Acetate, Halidryl Siliquosa Extract, Silica, Alcohol Denat., Sodium Metabisulfite, Caprylyl Glycol, Salisalic Acid, Xanthan Gum, Ethylhexylglycerin, Pueraria Lobata Symbiosome Extract, Citric Acid, Disodium EDTA, Parfum, BHA, BHT, Glycerin, Serine, Sodium Lactate, Sorbitol, Tea-Lactate, Urea, Sodium Chloride, Sodium Benzoate, Potassium Sorbate, Allantoin.

How to use:

1. Activator pre-treatment gel - Rinse the face with water. Apply the product gently and massage for 1-2 minutes. Remove with a soft damp cloth or rinse gently with water. Your skin is ready for the treatment.

2. Melanofree depigmentation maintenance cream - Before using the cream, wash/clean the face and pat dry. Apply the cream to the skin usually twice daily, in the morning and evening.
